Acke Whitepaper

1. Introduction

Acke ($ACKE) is a fully decentralized, community-driven memecoin that operates on the Solana blockchain. With no central control, roadmap, staking, or utility, Acke is a true experiment in decentralized growth. The project was launched ensuring a fair distribution and preventing any possibility of a rug-pull.

Acke aims to become the ultimate memecoin, fueled by organic community engagement and growth, where the holders are in control of the project's future. This document outlines the foundational principles of Acke, its tokenomics, and its vision.

2. Vision

The vision for Acke is to create a truly decentralized project, completely driven by its community. The development and direction of Acke are left open to community members to decide. Whether you want to create a decentralized autonomous organization (DAO), introduce a burn mechanism, or form partnerships, Acke gives its holders the freedom to shape the project's future.

3. Launch & Fair Distribution

Acke was launched ensuring that no rug-pull can occur from the founder's side. At launch, the market cap was set to **$200K**, and **95% of the total supply** was locked into liquidity pools. This provides all community members an equal opportunity to buy Acke at the same price during the early stages.

Since Acke is paired with Solana (SOL), the price of Acke in USD may fluctuate based on the value of Solana. However, the principles of decentralization and fair distribution remain at the core of the project.

4. Tokenomics

- **Total Supply**: 500,000,000 Acke tokens
- **Locked Liquidity**: 95% of the total token supply is locked in liquidity pools, ensuring stability and preventing any unfair advantage.
- **Founder Allocation**: 5% of the total supply is allocated to the founder, fully transparent and disclosed.
- **No Further Minting**: Acke tokens are capped at 500 million, ensuring no further tokens will ever be created, guaranteeing scarcity.

5. Decentralization

Acke is committed to a fully decentralized operation:

- There is **no central authority** governing the project. The future of Acke lies in the hands of the community.

- No **roadmap** or pre-determined goals are set. The project evolves through community participation and contribution.

- There is **no utility** or specific use case beyond the fun and community involvement that memecoins provide. Acke represents a pure memecoin experiment.

- The project operates transparently, with **no paid members** or artificial growth.

6. Community Growth & Engagement

Acke is building a genuine, **organic community**, where every member has an equal opportunity to contribute and participate in shaping the project's direction. There are no paid members, bots, or artificial tactics to inflate the numbers.

The growth strategy for Acke is simple: **real people, real community.** All engagement and marketing efforts are voluntarily contributed by the community. Acke welcomes developers, influencers, and content creators to join the project and help promote the token through their platforms.

7. Liquidity & Trading

Acke can be bought and traded on **Raydium**, a decentralized exchange on the Solana blockchain. The liquidity is locked, ensuring that no rug-pull can occur, and the tokens can be purchased with **Phantom** or **Solfare** wallets.

8. CEX Listing & Future Plans

Acke aims to be listed on centralized exchanges (CEX) as quickly as possible, to increase liquidity and provide greater exposure to the project. The focus is to grow the community organically and offer equal opportunities for all holders. The ultimate goal is to create partnerships with exchanges like **Gate.io**, **Kraken**, **Kucoin** and other major platforms, ensuring Acke's availability to a wider audience.

Although there is no formal roadmap, the **community** is free to propose new initiatives, including partnerships, token burns, or even establishing a DAO to govern future decisions.

9. Security

Acke was built with **security and transparency** at its core. Through the use of **smart contracts**, the liquidity is locked, making it impossible for the founders to withdraw and rug-pull the project. Additionally, all token allocations are publicly available and transparent.

10. Partnerships & Future Collaborations

Acke is open to forming strategic partnerships with influencers, developers, and key players in the crypto space. The project's success is based on the collaborative effort of its community members, and there is room for significant growth through meaningful partnerships.

If you're ready to contribute to the memecoin revolution, Acke welcomes your ideas and contributions.

11. Disclaimer

Acke ($ACKE) is a community-driven project created for entertainment purposes only. The project has no utility, promises, or guarantees. Participation in the Acke project is voluntary, and all risks associated with cryptocurrency and blockchain technology apply.
